

Mendocino Avalanche

Avalanche helps promote flower development in the final bloom stage when phosphate deficiency can effect yield.

Avalanche special form of soluble ortho phosphate helps

promote flower development in the final bloom stage. Properly timed phosphate applications helps support flower development.

May be applied by itself or in combination with other

fertilizer and nutrient products.

Do not apply to plants that are under moisture stress.

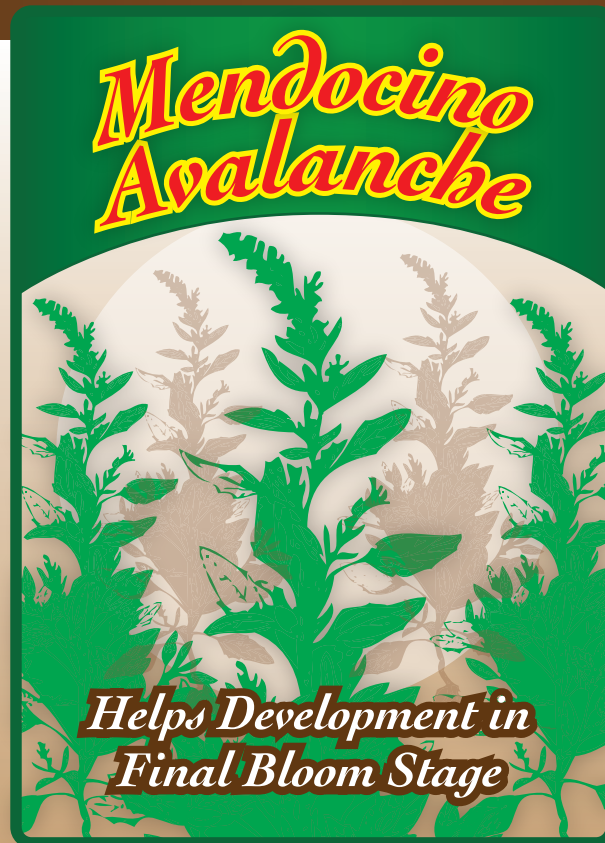

For use on most all flowering plants, hydroponics, aqua-ponics, coco coir, rockwood, indoor container, outdoor container, grow bags, artificial soil and field grown plants in native soil.
