Potential Acidity: 407 lbs. Calcium carbonate equivalent per ton.

Information regarding the contents and levels of metals in this product is available on the internet at: <http://www.aapfco.org/metals.html>

ATTENTION: The application of fertilizer material containing Molybdenum (Mo) may result in forage crops containing levels of Molybdenum (Mo) which are toxic to ruminant animals.

SUGGESTED FEEDING CONCENTRATIONS PPM NITROGEN
Jack's Professional® recommends these feed rates for the following crops. Remember to also consider plant stage, pot size, leaching fraction and environmental conditions when applying suggested rates. The quality of your water source will also affect overall feed rates, frequency and other additions in order to achieve optimum growth.

	Constant Liquid Feed (CLF)
Plugs/Salt Sensitive	50-125
Woody Ornamentals	50-100
Bedding Plants	100-150
General Foliage	100-200
Cut Flowers	175-225
Garden/Landscape	200-300
Heavy Feeders Geranium, Mum Lily, Poinsettia, Vegetable	200-300
Light Feeders NG impatiens, Fuchsia, Begonia, Fern, Orchid, Native perennial	75-150

MIXING INSTRUCTIONS
Chart displays the amount of dry fertilizer (oz.) to add to each gallon of water to make a concentrated solution. Please check your injector setting before use.

Desired N feed rate	Injector Setting			E.C. value (mmhos)
	1:15	1:100	1:200	
50 ppm	.5	3.38	6.75	.32
100 ppm	1.0	6.75	13.5	.64
200 ppm	2.0	13.5	27.0	1.28

Limit of Solubility = 4.5 lbs per gallon

Important Notes:
E.C. value is the best method to determine fertilizer strength. Fertilizer appearance may vary in color due to variation in raw material size and tracer dye distribution upon the particles in the bag. In solution, color will remain consistent.

For best results, use warm water to dissolve product. Jack's fertilizers are made with 100% soluble raw materials that will form a true solution. Some raw materials are slower to dissolve than others. Keep stock tank covered to reduce light and debris inputs.
