

WIGGLE WORM SOIL BUILDER **PURE** WORM CASTINGS

Our earthworm castings are completely organic so there is no chance of contamination with chemicals, pesticides or GMO's. We are currently listed with OMRI and CDFA as Organic Input Material. We use the Unco manufacturing system. A system we developed over 35 years ago. The Unco system allows us to control all aspects of the worm's environment 24 hours 7 days a week 365 days a year. When you control the environment i.e. moisture of bedding, quality and consistency of bedding, temperatures, place the right amount of worms per cu. ft. of bedding and be sure they are in the bedding for the right period of time, you will get PURE earthworm castings. Guaranteed Satisfaction or your money back.

Most other so-called worm farmers place worms in beds or windrows. They have no knowledge of how many worms per cu. ft. The bins or beds are open to the air, which means the moisture and the temperature of the bedding material is always changing. Without the ability to maintain consistent control of temperature, moisture, quality of feed stock and quantity of earthworms per cu. ft. they will NOT produce "PURE" earthworm castings on a consistent basis. I have seen worm castings which are claiming to be pure that were less than 20% worm castings and 80% uneaten bedding material.

UNCO guarantees quality and purity or your money back.
