

SOUL FEEDING SCHEDULE

This schedule is a general guideline for soil and soilless gardening. Soil users, please alternate usage between water and fertilizer.

MIX DIRECTIONS

Soul nutrients are designed for hydroponics or coco fiber growing medias but work great in soil as well. Since Soul nutrients are a fusion of the finest organic ingredients and the highest-quality compounds, they need to be treated slightly differently than traditional 100% chemical nutrients. Once the solution is mixed, biological activity can begin releasing additional nutrients that protect against pathogens and produce powerful biological stimulants. These aerobic living organisms need proper care. Use an air pump and air stones minimally, and add a circulation pump to keep up oxygen levels and prevent settling. For optimal nutrient uptake, continue to maintain a pH range of 5.8 to 6.3.

When introducing a new fertilizer to your program, start slow and increase levels gradually to insure compatibility and avoid fertilizer excess. If you don't notice benefits in your harvest from any product you are using, whether ours or another company's, then don't use it.
