

Single light in a 4'x4' grow tent

4'x4' PPF Footprint

Note: Photosynthetic Photon Flux Density (PPFD) data is produced by using professional lighting simulation software and third party laboratory photometric files. All PPF data are measured in $\mu\text{mol}/\text{m}^2/\text{s}$. The result assumes a single fixture being mounted in a 4'x4' grow tent with 85% wall reflectance. Actual measurement may vary depending on actual use conditions, input voltages, and measuring instruments. Professional lighting plans for commercial applications are available upon request.
