

⚠ WARNING

Sharp edges may cause serious injury from cuts. Use care when cutting plenum openings and handling duct work.

- When installing duct work, keep duct runs short with a minimum number of bends.
- Increasing the external static pressure will increase the power consumption and decrease the airflow, capacity and efficiency of the dehumidifier. Do not exceed 0.6" w.c.
- Equivalent round duct is 22". To reduce overall external static pressure, avoid using metal flex duct.
